

## WORKBENCH HOLDER SYSTEM

### ABSTRACT OF THE DISCLOSURE

A workbench holder system comprising a stop piece having a height and a thickness and a length in a generally rectilinear configuration with a first end having a first angled cut and with a second end having a second angled cut, one cut being at an obtuse angle and the other cut being at an acute angle. The system also comprises a cutting guide and a support bracket each coupled to the stop piece, the cutting guide and support bracket each having an upper horizontal component and a downwardly extending vertical component with a slot formed in the horizontal component of the cutting guide extending away from the stop piece and with apertures formed in the vertical components for coupling to the stop piece.
